(a) the funnel: 87,846 candidates to 32
candidates tried
87,846
$T_1^3 = T_2^4 = I$
49,446
unipotent cusp, $N^2 = 0$
272
coinvariants exactly $\mathbb{Z}$
84
invariant closure $= \ker \gamma$
84
$|\det B_0| = 1$
32
10^1
10^2
10^3
10^4
10^5
survivors at $B = 5$ (log scale)
(b) four conjugacy classes of 8; only one reaches $|p| = 1$
contains Alpöge's T_1, T_2
class A
least finite $|p| = 1$
class B
least finite $|p| = 6$
class C
least finite $|p| = 2$
class D
least finite $|p| = 3$
0
1
