$V - E + F = 1 - 3 + 2 = 0$: the dual complex of W is a torus

(a) the A_2 triangulation, modulo $B_0\mathbb{Z}^2$

(b) rolled up: 1 vertex, 3 edges, 2 triangles

vertex: the component E_0 — edges: double curves D_a (solid), D_b (dashed), D_c (dotted) — triangles: triple points P (filled), Q (hollow)
