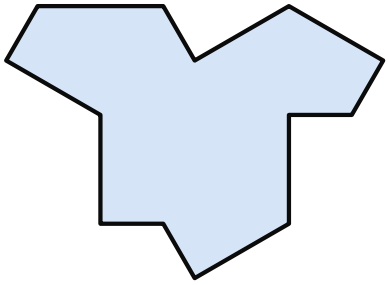
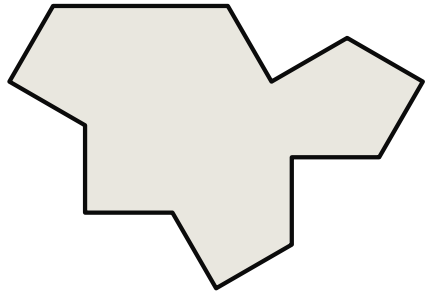
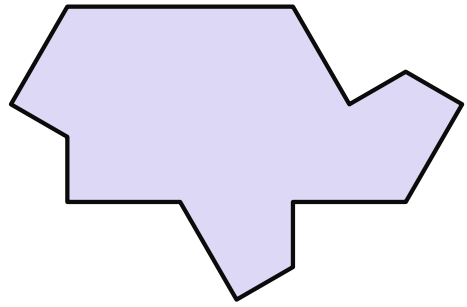
Hat, Tile(1, $\sqrt{3}$)
8 whole kites of the $\sqrt{3}$:1 lattice



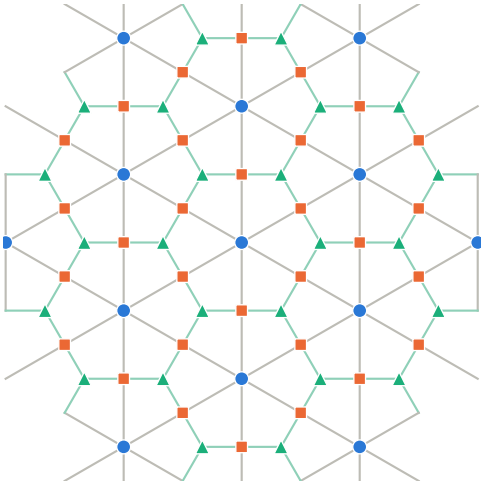
Spectre, Tile(1, 1)
not a union of kites of the $\sqrt{3}$:1 lattice



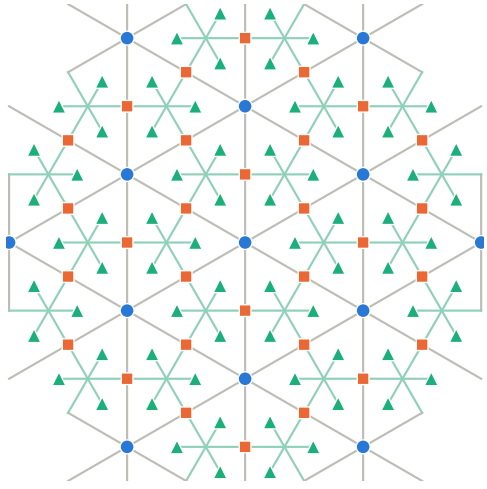
Turtle, Tile($\sqrt{3}$, 1)
10 whole kites of the $\sqrt{3}$:1 lattice



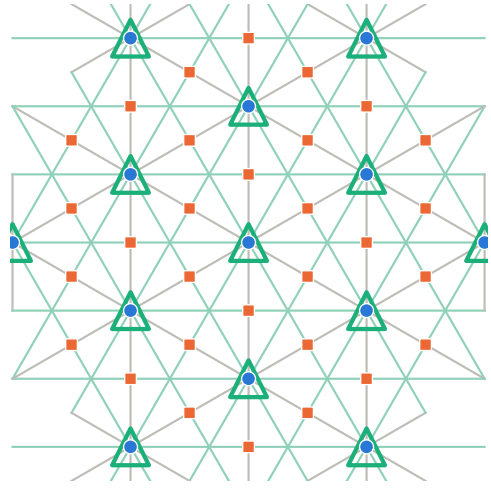
substrate at $a : b = \sqrt{3} : 1$



substrate at $a : b = 1 : 1$



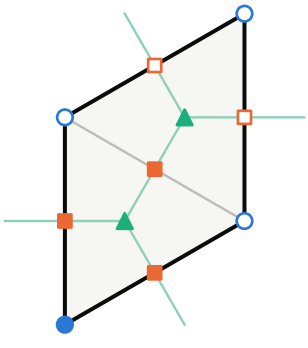
substrate at $a : b = 1 : \sqrt{3}$

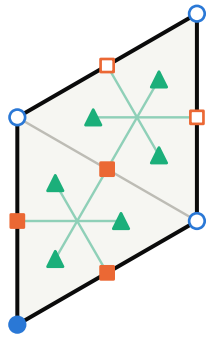


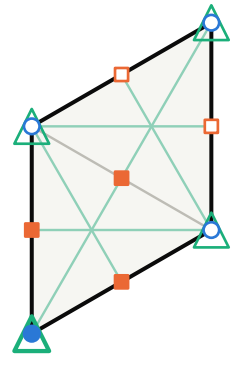
rolled up: 1 centre, 3 edges,
2 vertex sites
Hasse of A_2: yes (valence 3)

rolled up: 1 centre, 3 edges,
6 vertex sites
Hasse of A_2: no (corners apart, valence 1)

rolled up: 1 centre, 3 edges,
1 vertex site
Hasse of A_2: no (vertices on centres)







hexagon centre = component (dP_6) | edge midpoint = double curve | hexagon vertex = triple point | vertex site on a centre

Periods are normalised to 1 in every column; hollow marks in the bottom row are images of a representative on the domain's boundary.
